## Electricity

## IB Physics Content Guide

## Big Ideas

- Electricity consists of charged particles moving in a continuous circuit
- Voltage, Current, and Resistance are related to each other though Ohm's Law
- The total current flowing into a junction must equal the total current flowing out of that same junction
- The voltage dropped around a continuous loop traced in a circuit must equal the voltage provided
- Resistors can be combined in different ways to produce different results
- It is possible that the act of taking a measurement will change the value being measured
- The resistance of a wire is affected by its thickness, length, and material resistivity

## Content Objectives

## 1 - Electrical Current

| I can quantify charge in terms of Coulombs |  |  |
| :--- | :--- | :--- |
| I can calculate the charge of a certain \# of electrons and the \# of electrons for a given charge |  |  |
| I can describe current in terms of amps and coulombs per second |  |  |
| I can describe the subatomic properties of a conductor to allow charge to flow |  |  |
| I can the electron drift speed for a given current and wire |  |  |

## 2 - Electrical Properties

| I can describe the properties of Voltage, Current, Resistance, and Power |  |  |  |
| :--- | :--- | :--- | :--- |
| I can use Ohm's Law to mathematically relate these electrical properties and solve for an unknown |  |  |  |

## 3 - Circuits

| I can describe the direction of conventional current compared to the movement of charges |  |  |  |
| :--- | :--- | :--- | :--- |
| I can identify component combinations as parallel or series |  |  |  |
| I can describe how current flows through parallel and series resistors |  |  |  |
| I can describe the set up to measure current and voltage in a circuit |  |  |  |

## 4 - Calculating Resistance

| I can describe the property of resistivity and how it and the wire dimensions affect resistance |  |  |
| :--- | :--- | :--- |
| I can calculate the equivalent resistance for combinations of resistors in series and parallel |  |  |
| I can step through the calculation of the equivalent resistance for a complex combination |  |  |

## 5 - Voltage Dividers and Batteries

| I can use Kirchhoff's First Law to determine an unknown current at a junction |  |  |  |
| :--- | :--- | :--- | :--- |
| I can use Kirchhoff's Second Law to determine an unknown current at a junction |  |  |  |
| I can calculate voltage, current, and resistance for every component in a series or parallel circuit |  |  |  |
| I can compare and contrast the properties for simple series and parallel circuits |  |  |  |

6 - Potential Dividers

| I can identify the different circuit diagram symbols for different types of resistors |  |  |
| :--- | :--- | :--- |
| I can describe how environmental changes can affect the resistance of LDRs and Thermistors |  |  |
| I can describe how changing resistor values can affect the voltage drop in a potential divider circuit |  |  |
| I can design a potential divider circuit to perform a certain task |  |  |

## 7 - Voltage Dividers and Batteries

| I can connect a meter to measure current or voltage |  |  |
| :--- | :--- | :--- |
| I can describe the conditions required for an ideal ammeter or voltmeter |  |  |
| I can calculate for a situation when the meter isn't ideal |  |  |

## 8 - Batteries

| I can describe the difference between primary and secondary cells |  |  |
| :--- | :--- | :--- |
| I can define the electromotive force and describe how is it is different than terminal voltage |  |  |
| I can solve for a circuit that includes a battery with internal resistance |  |  |

## Electricity

## Charge

| Symbol | q | Unit | Coulombs [C] |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Charge of 1 Electron | $1.6 \times 10^{-19} \mathrm{C}$ |  |  |
| \# of Electrons per Coulomb | $6.25 \times 10^{18} \mathrm{e}^{-}$ |  |  |$\quad$| Symbol | I | Unit in terms of Coulombs | Amperes $[\mathrm{A}]$ |
| :---: | :---: | :---: | :---: |

| Property | What is it? | Symbol | Unit |
| :---: | :---: | :---: | :---: |
| Voltage | Potential Difference | V | Volts [V] |
| Current | The rate at which charges move through a wire | I | Amperes [A] |
| Resistance | How hard it is for a current to <br> flow through a conductor | R | Ohms [ $\Omega]$ |

## Power

| In terms of $V$ and $I$ | In terms of $I$ and $R$ | In terms of $V$ and $R$ |
| :---: | :--- | ---: |
| $P=V \times I$ | $P=I^{2} R$ | $P=\frac{V^{2}}{R}$ |

## Ohm's Law

| $V=I \times R$ | $I=\frac{V}{R}$ | $R=\frac{V}{I}$ |
| :--- | :--- | :--- |

| Measuring Circuits | Ammeter | Voltmeter |
| :---: | :---: | :---: |
| Ideal Resistance | $\mathrm{R}=0 \Omega$ | $\mathrm{R}=\infty \Omega$ |
| How is it connected to the <br> component being measured? | Ammeters must be <br> connected in series | Voltmeters must be <br> connected in parallel |
| Drawing of meter measuring $\mathrm{R}_{1}$ |  |  |

| Resistivity | Variable Symbol | Unit |
| :---: | :---: | :---: |
| Resistivity | $\rho$ | $\Omega \mathrm{m}$ |
| Resistance | R | $\Omega$ |
| Cross Sectional Area | A | $\mathrm{m}^{2}$ |
| Length | L | m |
| Ohmic Resistor | Non-Ohmic Resistor |  |

## Data Booklet Equation: <br> $$
\rho=\frac{R A}{L}
$$

Cross Sectional Area:

$$
\mathrm{A}=\pi \mathrm{r}^{2}
$$

## Equivalent Resistance

|  | Drawing with $R_{1}$ and $R_{2}$ | Equation |
| :---: | :---: | :---: |
| Series | $\rightarrow$ | $R_{\text {total }}=R_{1}+R_{2}+\cdots$ |
| Parallel | $\longrightarrow$ | $\frac{1}{R_{\text {total }}}=\frac{1}{R_{1}}+\frac{1}{R_{2}}+\cdots$ |

Kirchhoff's Laws

| $\Sigma I=0$ (junction) |  |  |  | $\Sigma V=0$ (loop) |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| The total current coming into a junction must equal the <br> total current leaving the same junction | The sum of the voltages (potential differences) provided <br> must equal the voltages dissipated across components |  |  |  |  |  |  |
|  | Across resistors |  | Always Negative |  |  |  |  |
| Entering Junction | $\rightarrow$ | $\bullet$ | Positive | Negative to Positive | $\rightarrow$ | $-1 \mid$ | Positive |
| Exiting Junction | $\bullet$ | $\rightarrow$ | Negative | Positive to Negative | $\rightarrow$ | $-\mid \vdash$ | Negative |

Voltage Dividers

| Symbol |  | Light-Dependent Resistor | Thermistor |
| :--- | :---: | :---: | :---: |
| Relationship | Resistance | Decreases | Resistance Decreases |
| Circuit | Switch turns on in the dark: | Switch turns on in a fire: |  |

## Batteries

| Primary Cells | Secondary Cells |
| :---: | :---: |
| Cannot be recharged | Can be recharged by passing a current through the battery <br> in the opposite direction as it would normally travel |

|  | Variable Symbol | Unit |
| :---: | :---: | :---: |
| Electromotive Force (e.m.f) | $\varepsilon$ | V |
| Current | I | A |
| Circuit Resistance | R | $\Omega$ |
| Internal Resistance | r | $\Omega$ |

## Data Booklet Equation:

$$
\varepsilon=I(R+r)
$$
