Coulomb's Law

$$F = k \frac{q_1 q_2}{r^2}$$

The force of attraction or repulsion between two point charges is directly proportional to the product of the two charges and inversely proportional to the square of the distance between them.

	Symbol	Unit
Electrostatic Force	F	[N]
Object 1 Charge	q_1	[C]
Object 2 Charge	q_2	[C]
Separation Distance	r	[m]

Sign is important!

$$F = k \frac{q_1 q_2}{r^2}$$

$$k = 8.99 \times 10^9 \text{ N m}^2 \text{ C}^{-2}$$

+ F → Repel (+)(+) or (-)(-)

- F → Attract (+)(-) or (-)(+)

Quantifying Charge

The total charge in Coulombs can be related to the number of electrons

Speed of light in vacuum	c	$3.00 \times 10^8 \text{ m s}^{-1}$
Planck's constant	h	$6.63 \times 10^{-34} \text{ J s}$
Elementary charge	e	$1.60 \times 10^{-19} \text{ C}$
Electron rest mass	m_e	$9.110 \times 10^{-31} \text{ kg} = 0.000549 \text{ u} = 0.511 \text{ MeV c}^{-2}$
Proton rest mass	m_p	$1.673 \times 10^{-27} \text{ kg} = 1.007276 \text{ u} = 938 \text{ MeV c}^{-2}$
Neutron rest mass	m_n	$1.675 \times 10^{-27} \text{ kg} = 1.008665 \text{ u} = 940 \text{ MeV c}^{-2}$
Unified atomic mass unit	u	$1.661 \times 10^{-27} \text{ kg} = 931.5 \text{ MeV c}^{-2}$

Quantifying Charge

The coulomb was selected to use with electric currents which makes it a very large unit for static electricity. **Get your metric prefixes ready**

Conversion Check

7 μC \rightarrow C

$$7 \times 10^{-6} \text{ C}$$

kilo	k	10^3
hecto	h	10^2
deca	da	10^1
deci	d	10^{-1}
centi	c	10^{-2}
milli	m	10^{-3}
micro	μ	10^{-6}
nano	n	10^{-9}

Try This

A small cork with an excess charge of $+7.0 \mu\text{C}$ is placed 14 cm from another cork, which carries a charge of $-3.2 \mu\text{C}$. What is the magnitude of the electric force between the corks?

$$F = k \frac{q_1 q_2}{r^2} = (8.99 \times 10^9) \frac{(7 \times 10^{-6})(-3.2 \times 10^{-6})}{(0.14)^2}$$

$$F = -10.3 \text{ N}$$

attract

$$F = k \frac{q_1 q_2}{r^2}$$

$$k = 8.99 \times 10^9 \text{ N m}^2 \text{ C}^{-2}$$

$$\text{Elementary Charge} = 1.60 \times 10^{-19} \text{ C}$$

How many electrons??

A small cork with an excess charge of $+7.0 \mu\text{C}$ is placed 14 cm from another cork, which carries a charge of $-3.2 \mu\text{C}$. What is the magnitude of the electric force between the corks?

How many excess electrons on the second cork??

$$-3.2 \times 10^{-6} \text{ C} \times \frac{1 \text{ electron}}{-1.60 \times 10^{-19} \text{ C}} = 2 \times 10^{13} \text{ electrons}$$

$$F = k \frac{q_1 q_2}{r^2} \quad k = 8.99 \times 10^9 \text{ N m}^2 \text{ C}^{-2} \quad \text{Elementary Charge} = 1.60 \times 10^{-19} \text{ C}$$

Gravity

What is Gravity?

Idea #1: A downward force that stops you from flying away

Idea #2: An attraction towards larger objects

Idea #3: All mass attracts all other mass

Circle the answer that you agree with most

Universal Law of Gravitation

$$F = G \frac{Mm}{r^2}$$

The force of attraction between bodies with mass is directly proportional to the product of the two masses and inversely proportional to the square of the distance between them.

	Symbol	Unit
Gravitational Force	F	[N]
Object 1 Mass	M	[kg]
Object 2 Mass	m	[kg]
Separation Distance	r	[m]

Universal Law of Gravitation

$$F = G \frac{Mm}{r^2}$$

$G \rightarrow$ Universal Gravitational Constant

$$G = 6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$$

IB Physics Data Booklet

Sub-topic 6.2 – Newton's law of gravitation

$$F = G \frac{Mm}{r^2}$$

**Universal Law of Gravitation*

$$g = \frac{F}{m}$$

$$g = G \frac{M}{r^2}$$

Fundamental constants

Quantity	Symbol	Approximate value
Acceleration of free fall (Earth's surface)	g	9.81 m s^{-2}
Gravitational constant	G	$6.67 \times 10^{-11} \text{ N m}^2 \text{ kg}^{-2}$

Gravity – Equal and Opposite

The force on the skydiver is the same as the force on the earth but the earth's huge mass means that there is hardly any acceleration

Measuring the proper distance

Technically Newton's Law of Gravitation defines how to calculate the gravitational force between two **point masses**

(Not a point mass)

Fortunately, Newton's shell theorem states that:

“A spherically symmetric shell of mass M acts as if all of its mass is located at its center.”

Try This

Determine the force of gravitational attraction between the earth ($m = 5.98 \times 10^{24}$ kg) and a 70-kg physics student if the student is in an airplane at 40000 feet above earth's surface. This would place the student a distance of 6.39×10^6 m from earth's center.

$$F = G \frac{Mm}{r^2} = (6.67 \times 10^{-11}) \frac{(5.98 \times 10^{24})(70)}{(6.39 \times 10^6)^2}$$

$$F = 684 \text{ N}$$

Comparison

Electrostatic Force

$$F = k \frac{q_1 q_2}{r^2}$$

$k \rightarrow$ Coulomb Constant

$q_1, q_2 \rightarrow$ Charges [C]

Gravitational Force

$$F = G \frac{Mm}{r^2}$$

$G \rightarrow$ Gravitational Constant

$M, m \rightarrow$ Masses [kg]

Permittivity

Coulomb's Constant is sometimes expanded to this form:

$$k = \frac{1}{4\pi\epsilon_0}$$

$\epsilon_0 \rightarrow$ Permittivity of Free Space (vacuum)

$$\epsilon_0 = 8.85 \times 10^{-12} \text{ C}^2 \text{ N}^{-1} \text{ m}^{-2}$$

**Solving for k will get Coulomb's Constant for a vacuum*

IB Physics Data Booklet

Sub-topic 5.1 – Electric fields

$$I = \frac{\Delta q}{\Delta t}$$

$$F = k \frac{q_1 q_2}{r^2}$$

$$k = \frac{1}{4\pi\epsilon_0} \quad \text{*Solving for } k$$

$$V = \frac{W}{q}$$

$$E = \frac{F}{q}$$

$$I = nAvq$$

Sub-topic 5.3 – Electric cells

$$\epsilon = I(R + r)$$

Sub-topic 5.2 – Heating effect of electric currents

Kirchhoff's circuit laws:

$$\Sigma V = 0 \text{ (loop)}$$

$$\Sigma I = 0 \text{ (junction)}$$

$$R = \frac{V}{I}$$

$$P = VI = I^2 R = \frac{V^2}{R}$$

Quantity	Symbol	Approximate value

Coulomb constant	k	$8.99 \times 10^9 \text{ N m}^2 \text{ C}^{-2}$
Permittivity of free space	ϵ_0	$8.85 \times 10^{-12} \text{ C}^2 \text{ N}^{-1} \text{ m}^{-2}$
Permeability of free space	μ_0	$4\pi \times 10^{-7} \text{ T m A}^{-1}$
Speed of light in vacuum	c	$3.00 \times 10^8 \text{ m s}^{-1}$

Permittivity

Permittivity changes relative to the substance

Relative Permittivity

$$\epsilon_r = \frac{\epsilon}{\epsilon_0}$$

IB might ask you about this: the higher the relative permittivity, the harder it is for electrostatic forces to travel over a distance...

Relative Permittivities
