## Measurement

## How can you quantify a measurement?

## Systems and Units

## Fundamental S.I. Units:

$\left\{\begin{array}{l|c|c|}\hline \text { Length } & \text { Meter } & \mathrm{m} \\ \hline \text { Mass } & \text { Kilogram } & \mathrm{kg} \\ \hline \text { Time } & \text { Second } & \mathrm{s} \\ \hline \text { Electric Current } & \text { Ampere (amp) } & \mathrm{A} \\ \hline \text { Temperature } & \text { Kelvin } & \mathrm{K} \\ \hline \text { Amount of Substance } & \text { Mole } & \mathrm{mol} \\ \hline \text { Luminous Intensity } & \text { Candela } & \mathrm{cd} \\ \hline\end{array}\right.$

## Units are Arbitrary

1790 - The length of a pendulum that swings half of its maximum distance in one second

1795 - The length of an official bar of brass fabricated to be exactly one meter as determined in 1791

1889 - The distance
between two lines on an official bar of platinumiridium alloy, measured at $0^{\circ} \mathrm{C}$

1791 - The length of one ten-millionth of the distance between the North Pole and the equator

1799 - The length of an official bar of platinum, measured from the brass bar and stored at the French National archives

1983 - The length traveled
by light in a vacuum during
$1 / 299,792,458$ of a second

## What's 'the standard'?

All of our base SI units are grounded in some "standard" that helps maintain consistency.

Some of these units even reference each other...

Definition of the Second

12
The "second" is defined as the interval required for $9,192,631,770$ vibrations of the cesium-133 atom measured via an atomic beam clock

## Fundamental vs Derived

## Fundamental

 S.I. Units| Length | m |
| :---: | :---: |
| Mass | kg |
| Time | s |

## Derived Units

Velocity:

$$
m / s
$$

Acceleration:

$$
m /_{S^{2}}=m / s /_{S}
$$

Force:

$$
N=k g \times m / s^{2}
$$

## Welcome to IB Land!

Since this course is International all of the units must be in the "European" format rather than the "American" format This means that instead of writing units with a fraction slash, we must use negative exponents

## There's more...

## Lesson Takeaways

$\square$ I can describe the difference between quantitative and qualitative observations
$\square$ I can identify the 7 Fundamental SI units
$\square$ I can define and give an example of a derived unit
$\square$ I can represent fractional units with negative exponents
$\square$ I can convert metric units between prefixes
