## Dimensional Analysis

IB PHYSICS | MOTION

## Conversions

## Convert the Following:

26.2 miles $\rightarrow$ kilometers

1 Mile = 1.609 Kilometers

## Conversions with fractions

Convert the Following:
$35 \mathrm{mi} \mathrm{hr}^{-1} \rightarrow \mathrm{~m} \mathrm{~s}^{-1}$
1 Mile = 1609 meters

## Conversions with Exponents

How many $\mathrm{cm}^{2}$ are there in $1 \mathrm{~m}^{2}$ ?

How many $\mathrm{cm}^{3}$ are there in $1 \mathrm{~m}^{3}$ ?

## Conversions with Exponents

## Convert the Following:

$0.05 \mathrm{~km}^{2} \rightarrow \mathrm{~m}^{2}$

## Conversions with Exponents

Convert the Following: 1 meter $=3.28$ feet
$5 \mathrm{~m}^{2} \rightarrow \mathrm{ft}^{2}$
$5 \mathrm{~m}^{3} \rightarrow \mathrm{ft}^{3}$

## Dimensional Analysis

Start with the formula and substitute units in for variables

$$
v=\frac{d}{t}
$$

Is this formula valid?

$$
d=a t
$$

## Dimensional Analysis

We can use equations with units that we know to find units that we don't.

## $p=m \times v$

| Variable | Unit |
| :---: | :---: |
| Momentum <br> $\mathbf{p}$ |  |
| Mass <br> $\mathbf{m}$ | Kilogram <br> $[\mathrm{kg}]$ |
| Velocity <br> $\mathbf{v}$ | Meters per second <br> $\left[\mathrm{ms}^{-1}\right]$ |

## Dimensional Analysis

Constants have units too! That's what makes our equation valid

$$
F=G \frac{m_{1} m_{2}}{d^{2}}
$$

| Variable | Unit |
| :---: | :---: |
| Force | Newton |
| $\mathbf{F}$ | $[\mathrm{N}]$ |
| Mass  <br> $\mathbf{m}_{\mathbf{1}}$ and $\mathbf{m}_{\mathbf{2}}$ Kilogram <br> Distance $[\mathrm{kg}]$ |  |
| $\mathbf{d}$ | Meter |
| Universal |  |
| Gravitation Constant |  |
| $\mathbf{G}$ |  |

# Normalized Scientific Notation 

## Helpful for very big numbers

$89,000,000=$

750,000,000,000 =
$8,759,000,000=$

## Helpful for very small numbers

$0.00125=$
$0.0000008255=$
$0.00000082550=$

## Lesson Takeaways

I can convert fraction units and exponential units using Dimensional Analysis
I can use dimensional analysis to verify a formula
I can use dimensional analysis to determine the units for a solution

I can represent large and small numbers using scientific notation
