

MOTION

IB PHYSICS | COMPLETED NOTES

Units

IB PHYSICS | MOTION

Two Types of Observations

Provide some examples of each

Quantitative	"How Many" / "How Much" Numerical
Qualitative	Description

Measurement

How can you quantify a measurement?

Systems and Units

Fundamental S.I. Units:

	Length	Meter	m
	Mass	Kilogram	kg
	Time	Second	s
	Electric Current	Ampere (amp)	A
	Temperature	Kelvin	K
	Amount of Substance	Mole	mol
	Luminous Intensity	Candela	cd

Units are Arbitrary

Take the history
of the meter...

1790 - The length of a pendulum that swings half of its maximum distance in one second

1795 - The length of an official bar of brass fabricated to be exactly one meter as determined in 1791

1889 - The distance between two lines on an official bar of platinum-iridium alloy, measured at 0°C

1791 - The length of one ten-millionth of the distance between the North Pole and the equator

1799 - The length of an official bar of platinum, measured from the brass bar and stored at the French National archives

1983 - The length traveled by light in a vacuum during $1/299,792,458$ of a second

What's 'the standard'?

All of our base SI units are grounded in some “standard” that helps maintain consistency.

Some of these units even reference each other...

Definition of the Second

The “second” is defined as the interval required for 9,192,631,770 vibrations of the cesium-133 atom measured via an atomic beam clock

Primary and Secondary Colors

Primary Colors

Secondary Colors

Fundamental vs Derived

Fundamental S.I. Units

Length	m
Mass	kg
Time	s

Derived Units

Velocity:

$$m/s$$

Acceleration:

$$m/s^2 = m/s/s$$

Force:

$$N = kg \times m/s^2$$

Welcome to IB Land!

Since this course is *International* all of the units must be in the “European” format rather than the “American” format

This means that instead of writing units with a fraction slash, we must use negative exponents

7 m/s	m s⁻¹	$6.67 \frac{\text{Nm}^2}{\text{kg}^2}$	N m² kg⁻²
9.81 m/s ²	m s⁻²	$2.2 \frac{\text{J}}{\text{K}}$	J K⁻¹
87 g/cm ³	g cm⁻³	$8.31 \frac{\text{J}}{\text{K} \times \text{mol}}$	J K⁻¹ mol⁻¹

The Metric System

*Taken directly from the IB Physics Data Booklet

Prefix	Abbreviation	Value
peta	P	10^{15}

There's more...

"What about Instagram?"

Lesson Takeaways

- ☐ I can describe the difference between quantitative and qualitative observations
- ☐ I can identify the 7 Fundamental SI units
- ☐ I can define and give an example of a derived unit
- ☐ I can represent fractional units with negative exponents
- ☐ I can convert metric units between prefixes

Dimensional Analysis

IB PHYSICS | MOTION

Conversions

Convert the Following:

26.2 miles → kilometers

1 Mile = 1.609 Kilometers

$$26.2 \cancel{\text{mi}} \times \frac{1.609 \text{ km}}{1 \cancel{\text{mi}}} = \boxed{42.2 \text{ km}}$$

Conversions with fractions

Convert the Following:

$$35 \text{ mi hr}^{-1} \rightarrow \text{m s}^{-1}$$

$$1 \text{ Mile} = 1609 \text{ meters}$$

$$\frac{35 \cancel{\text{mi}}}{1 \cancel{\text{hr}}} \times \frac{1609 \text{ m}}{1 \cancel{\text{mi}}} \times \frac{1 \cancel{\text{hr}}}{60 \cancel{\text{min}}} \times \frac{1 \cancel{\text{min}}}{60 \text{ s}} = \mathbf{15.6 \text{ m s}^{-1}}$$

Conversions with Exponents

How many cm^2 are there in 1 m^2 ?

$$100 \times 100 = 100^2 = \mathbf{10,000 \text{ cm}^2}$$

How many cm^3 are there in 1 m^3 ?

$$100 \times 100 \times 100 = 100^3 = \mathbf{1,000,000 \text{ cm}^3}$$

Conversions with Exponents

Convert the Following:

$$0.05 \text{ km}^2 \rightarrow \text{m}^2$$

$$0.05 \text{ km}^2 \times \frac{1000 \text{ m}}{1 \text{ km}} \times \frac{1000 \text{ m}}{1 \text{ km}} = \boxed{50,000 \text{ m}^2}$$

$$0.05 \text{ km}^2 \times \left(\frac{1000 \text{ m}}{1 \text{ km}} \right)^2 = \boxed{50,000 \text{ m}^2}$$

Conversions with Exponents

Convert the Following:

$$1 \text{ meter} = 3.28 \text{ feet}$$

$$5 \text{ m}^2 \rightarrow \text{ft}^2$$

$$5 \text{ m}^2 \times \left(\frac{3.28 \text{ ft}}{1 \text{ m}} \right)^2 = \mathbf{53.8 \text{ ft}^2}$$

$$5 \text{ m}^3 \rightarrow \text{ft}^3$$

$$5 \text{ m}^3 \times \left(\frac{3.28 \text{ ft}}{1 \text{ m}} \right)^3 = \mathbf{176.4 \text{ ft}^3}$$

Dimensional Analysis

Start with the formula and substitute units in for variables

$$v = \frac{d}{t}$$

$$\left[\frac{m}{s} \right] = \frac{[m]}{[s]}$$

Is this formula valid?

$$d = at \quad [m] = \left[\frac{m}{s^2} \right] [s]$$

not valid

$$\left[\frac{m}{s} \right] \neq \left[\frac{m}{s^2} \right] [s]$$

Dimensional Analysis

We can use equations with units that we know to find units that we don't.

$$p = m \times v$$
$$= [\text{kg}] \left[\frac{\text{m}}{\text{s}} \right]$$

Variable	Unit
Momentum p	kg m s⁻¹
Mass m	Kilogram [kg]
Velocity v	Meters per second [ms ⁻¹]

Dimensional Analysis

Constants have units too! That's what makes our equation valid

$$F = G \frac{m_1 m_2}{d^2}$$

$$G = \frac{F d^2}{m_1 m_2} = \frac{[\text{N}][\text{m}]^2}{[\text{kg}]^2}$$
$$= \frac{[\text{N}][\text{m}]^2}{[\text{kg}]^2}$$

Variable	Unit
Force F	Newton [N]
Mass m₁ and m₂	Kilogram [kg]
Distance d	Meter [m]
Universal Gravitation Constant G	N m² kg⁻²

Normalized Scientific Notation

Helpful for very **big** numbers

$$89,000,000 = 8.9 \times 10^7 \quad \text{or} \quad 8.9\text{E}7$$

$$750,000,000,000 = 7.5 \times 10^{11} \quad \text{or} \quad 7.5\text{E}11$$

$$8,759,000,000 = 8.759 \times 10^9 \quad \text{or} \quad 8.759\text{E}9$$

Normalized Scientific Notation

Helpful for very **small** numbers

$$0.00125 = 1.25 \times 10^{-3} \quad \text{or} \quad 1.25\text{E-}3$$

$$0.0000008255 = 8.255 \times 10^{-7} \quad \text{or} \quad 8.255\text{E-}7$$

$$0.00000082550 = 8.2550 \times 10^{-7} \quad \text{or} \quad 8.2550\text{E-}7$$

Lesson Takeaways

- ☐ I can convert fraction units and exponential units using Dimensional Analysis
- ☐ I can use dimensional analysis to verify a formula
- ☐ I can use dimensional analysis to determine the units for a solution
- ☐ I can represent large and small numbers using scientific notation

Displacement Graphs

IB PHYSICS | MOTION

What is Motion?

An object's change in position
relative to a reference point.

Relative to the earth:
Moving 17,500 mph

Relative to the shuttle:
Not moving

Distance vs. Displacement

Distance

How far travelled

Displacement

How far from origin

Distance and Displacement in 2D

Distance as the Crow Flies : 1170.297

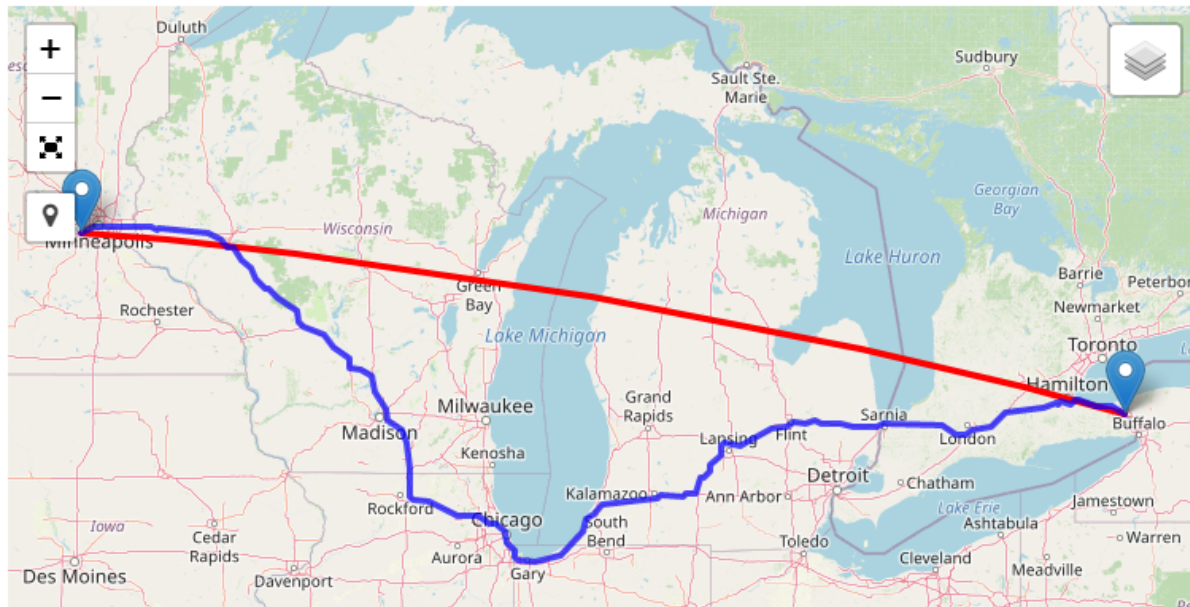

Distance by Land Transport : 1525.995

This road journey will take 21 Hours, 11 Minutes

You can link to this result : [How Far is it Between Minnetonka High School - The Cove, Minnetonka and Niagara Falls, Canada](https://www.freemaptools.com/how-far-is-it-between-minnetonka-high-school---the-cove_-minnetonka-and-niagra-falls_-ca)

https://www.freemaptools.com/how-far-is-it-between-minnetonka-high-school---the-cove_-minnetonka-and-niagra-falls_-ca

Map Showing the Distance Between Minnetonka High School - The Cove, Minnetonka and Niagara Falls, Canada

Try this | Distance and Displacement

You walked 5 km East, turned around and walked 2 km West, turned around again and walked another 4 km East. What is your distance? What is your displacement?

$$5 + 2 + 4$$

Distance

11 km

Displacement

7 km

Graphing Displacement

You walked 5 km East, turned around and walked 2 km West, turned around again and walked another 4 miles km. What is your distance? What is your displacement?

Stroboscopic Photographs

In a stroboscopic photograph, a new snapshot is captured every ____ seconds and combined to show the motion over a period of time.

Circle the part of the motion where this soccer ball is moving the FASTEST

Circle the part of the motion where this soccer ball is moving the SLOWEST

Stroboscopic Photographs

Constant Velocity or Accelerating?

How do you know?

More spacing between pictures = moving faster

Predict the Motion...

Which cart do you think has the best chance of reaching the 10-meter location first?

Time	0.0 s	1.0 s	2.0 s	3.0 s
Cart A	0.0 m			
Cart B	2.0 m			
Cart C	3.0 m			

Predict the Motion...

Now which cart do you think has the best chance of reaching the 10-meter location first?

Time	0.0 s	1.0 s	2.0 s	3.0 s
Cart A	0.0 m	4.0 m		
Cart B	2.0 m	4.0 m		
Cart C	3.0 m	4.0 m		

What new information do you have about the carts now that you didn't before?

Predict the Motion...

Now which cart do you think has the best chance of reaching the 10-meter location first?

Time	0.0 s	1.0 s	2.0 s	3.0 s
Cart A	0.0 m	4.0 m	7.0 m	??
Cart B	2.0 m	4.0 m	6.0 m	??
Cart C	3.0 m	4.0 m	6.0 m	??

What patterns do you see? Can you use these to predict the next position?

Predict the Motion...

It's more than just position, you need multiple frames to see motion

Time	0.0 s	1.0 s	2.0 s	3.0 s
Cart A	0.0 m	4.0 m	7.0 m	9.0 m
Cart B	2.0 m	4.0 m	6.0 m	8.0 m
Cart C	3.0 m	4.0 m	6.0 m	9.0 m

An object not moving

An object moving forward

An object moving backward

Showing Velocity

Speeding Up (moving positive)

Speeding Up (moving negative)

How are these Similar?

Getting faster because the graph is getting steeper (farther spacing)

Slowing Down (moving positive)

Slowing Down (moving negative)

Displacement vs Time Graphs

Which graph(s) represent an object moving in the negative direction?

Which graph(s) represent an object slowing down?

Lesson Takeaways

- ☐ I can describe the difference between distance and displacement
- ☐ I can calculate distance and displacement for 1D motion
- ☐ I can plot constant velocity on a displacement vs time graph
- ☐ I can plot changing velocity on a displacement vs time graph
- ☐ I can use a displacement vs time graph to identify if an object is moving in the positive or negative direction as well as if it is speeding up or slowing down

Velocity Graphs

IB PHYSICS | MOTION

What is...

Speed

The rate of change of position
"how fast"

Velocity

Speed with direction

What is a Vector?

A Vector is a quantity that includes both **direction** and **magnitude**

Vector vs Scalar

Vector Quantities

Displacement

Velocity

Force

Can be negative to
indicate direction

Scalar Quantities

Distance

Speed

Energy

Only Positive

An object not moving

An object moving forward

An object moving backward

Showing Velocity

Speeding Up (moving positive)

Speeding Up (moving negative)

How are these Similar?

Getting faster because velocity is getting farther from zero

Slowing Down (moving positive)

Slowing Down (moving negative)

Velocity vs Time Graphs

Which graph(s) represent an object moving in the negative direction?

Which graph(s) represent an object slowing down?

What is...

Velocity

change in **position** over time
"speed *with direction*"

Acceleration

change in **velocity** over time

Types of Acceleration

Speeding Up

Slowing Down

Changing Direction

Acceleration is Related to Force

0-30 m s⁻¹ in 10 seconds

0-30 m s⁻¹ in 2.5 seconds

Acceleration | Slowing or Speeding?

When the acceleration is in the **same** direction as the velocity the object is speeding up

"Foot on the Gas"

When the acceleration is in the **opposite** direction as the velocity the object is slowing down

"Foot on the Brake"

Lesson Takeaways

- ☐ I can describe the difference between speed and velocity
- ☐ I can compare the difference between a vector and scalar quantity
- ☐ I can plot constant velocity on a velocity vs time graph
- ☐ I can plot changing velocity on a velocity vs time graph
- ☐ I can use a velocity vs time graph to identify if an object is moving in the positive or negative direction as well as if it is speeding up or slowing down
- ☐ I can define acceleration in terms of velocity

Calculating from Graphs

IB PHYSICS | MOTION

Motion Graphs Guide

Calculating Instantaneous Velocity

The power of the slope!

Average Speed and Velocity

$$\text{Average Speed} = \frac{\text{Total Distance}}{\text{Total Time}}$$

* Always Positive

$$\text{Average Velocity} = \frac{\text{Total Displacement}}{\text{Total Time}}$$

* Includes Direction

Calculating Average Speed

Eliud Kipchoge broke the 2-hour marathon (26.2 miles) in October of 2019. Kipchoge finished in 1.99 hours. What was his average speed in mph?

$$v = \frac{d}{t} = \frac{26.2}{1.99} =$$

$$13.2 \text{ mi hr}^{-1}$$

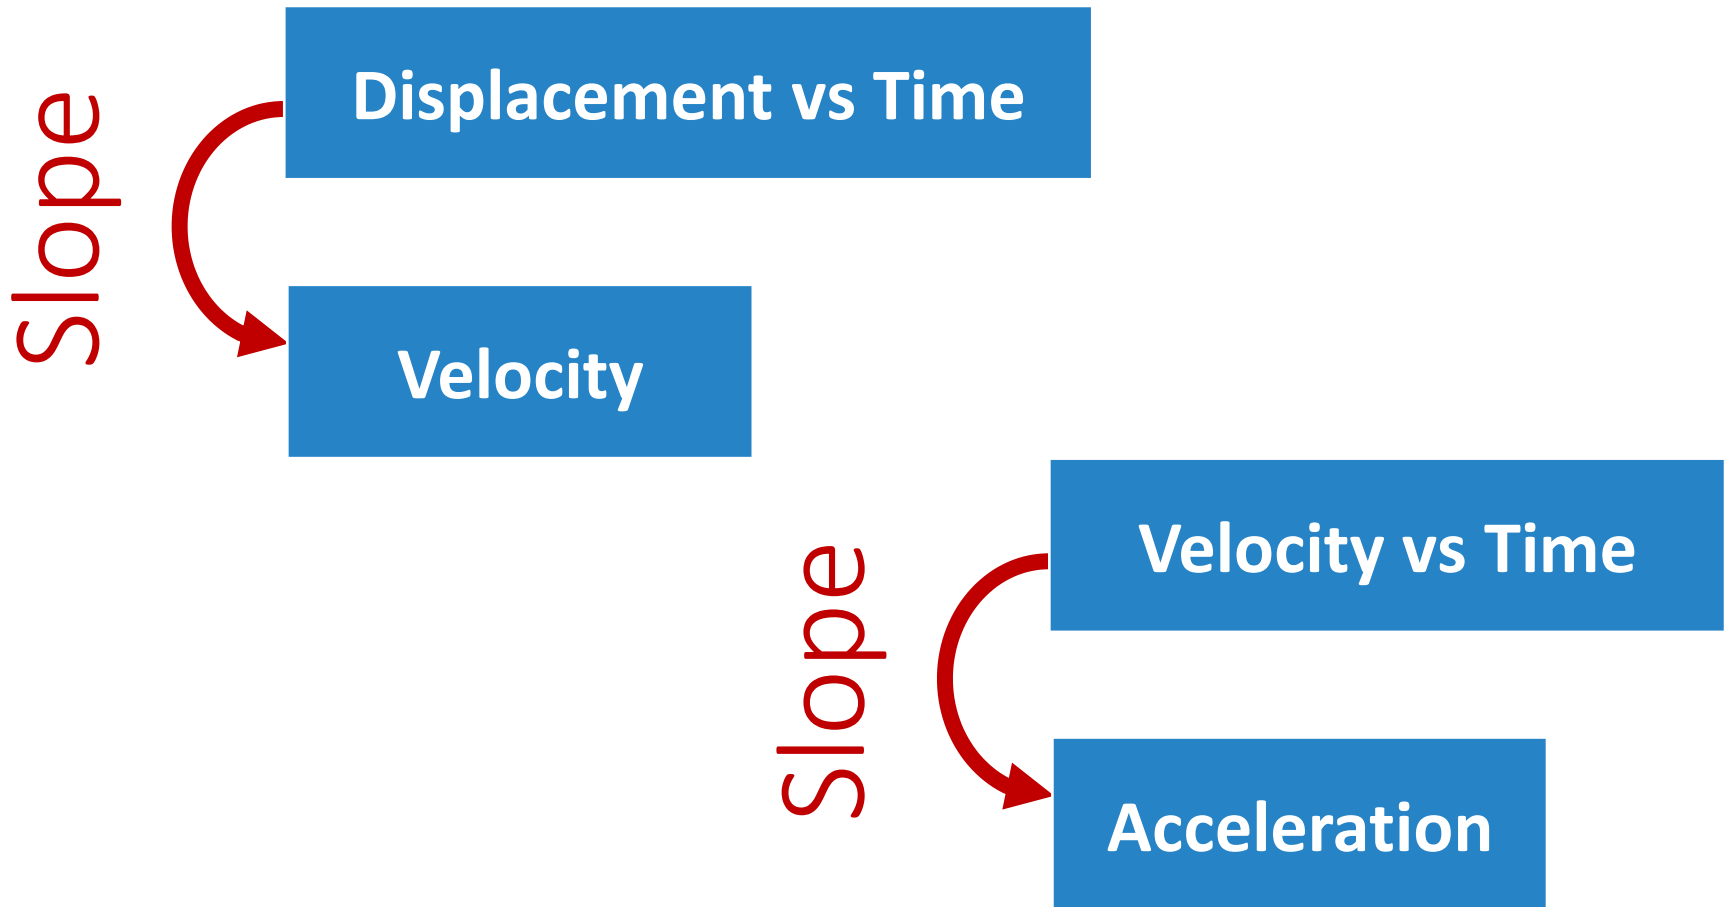

Average vs Instantaneous

An object speeding up (positive)

The power of the slope!

Calculating Displacement

Information from a V vs T graph

What is the velocity at 4 seconds?

$$4 \text{ m s}^{-1}$$

What is the acceleration from 1 s – 4 s?

$$\text{Slope} = 1 \text{ m s}^{-2}$$

What is the displacement after 4 s?

$$\text{Area} = 8 \text{ m}$$

Information from a V vs T graph

What is the velocity at 4 seconds?

$$-4 \text{ m s}^{-1}$$

What is the acceleration from 0 s – 4 s?

$$\text{Slope} = -1 \text{ m s}^{-2}$$

What is the displacement after 4 s?

$$\text{Area} = -8 \text{ m}$$

Information from a V vs T graph

What is the velocity at 4 seconds?

$$4 \text{ m s}^{-1}$$

What is the acceleration from 0 s – 4 s?

$$\text{Slope} = 0.5 \text{ m s}^{-2}$$

What is the displacement after 4 s?

$$\text{Area} = 12 \text{ m}$$

Information from a V vs T graph

What is the velocity at 3 seconds?

$$-2 \text{ m s}^{-1}$$

What is the acceleration from 1 s – 3 s?

$$\text{Slope} = -2 \text{ m s}^{-2}$$

What is the displacement after 3 s?

$$(2) + (1) + (-1) = \text{Area} = 2 \text{ m}$$

Use the graphs to tell you MORE!

Lesson Takeaways

- ☐ I can use an equation to calculate average speed/velocity
- ☐ I can calculate instantaneous velocity using the slope of a displacement vs time graph
- ☐ I can calculate instantaneous acceleration using the slope of a velocity vs time graph
- ☐ I can calculate overall displacement using the area of a velocity vs time graph

The Kinematic Equations

IB PHYSICS | MOTION

Motion Variables

Displacement	Initial Velocity	Final Velocity	Acceleration	Time
s	u	v	a	t

Whenever we are describing the motion of an accelerating object, there are five variables that we need to take into account

Note: The variables used in IB Physics vary slightly from other nomenclature standards

Calculating Acceleration

$$\text{acceleration} = \frac{\text{final velocity} - \text{initial velocity}}{\text{change in time}}$$

Symbols

$$\mathbf{a} = \frac{\mathbf{v} - \mathbf{u}}{\mathbf{t}}$$

Units

$$\text{ms}^{-2} = \frac{\text{ms}^{-1} - \text{ms}^{-1}}{\text{s}}$$

Think about this unit...

m/s/s

m/s²

m s⁻²

Try This | 1

What is the acceleration of a car that accelerates from 15 m s^{-1} to 35 m s^{-1} in 10 seconds?

u	15 ms^{-1}
v	35 ms^{-1}
a	?
t	10 s

$$a = \frac{v - u}{t} = \frac{35 - 15}{10}$$

$$a = 2 \text{ ms}^{-2}$$

Try This | 2

Find the average acceleration of a northbound train that slows down from 12 m s^{-1} to a complete stop in 8 sec

**Tip: You can get a negative value!*

u	12 ms^{-1}
v	0 ms^{-1}
a	?
t	8 s

$$a = \frac{v - u}{t} = \frac{0 - 12}{8}$$

$$a = -1.5 \text{ ms}^{-2}$$

Solve for v

$$a = \frac{v - u}{t}$$

$$v = u + at$$

Physics Data Booklet

Sub-topic 2.1 – Motion

$$v = u + at$$

$$s = ut + \frac{1}{2}at^2$$

$$v^2 = u^2 + 2as$$

$$s = \frac{(v + u)t}{2}$$

How far have I gone?

$$s = vt = (80 \text{ m s}^{-1})(10 \text{ s}) = 800 \text{ m}$$

$$\text{area under graph} = (80 \text{ m s}^{-1})(10 \text{ s}) = 800 \text{ m}$$

Use the graphs to tell you MORE!

How far have I gone?

Physics Data Booklet

Sub-topic 2.1 – Motion

$$v = u + at$$

$$s = ut + \frac{1}{2}at^2$$

$$v^2 = u^2 + 2as$$

$$s = \frac{(v + u)t}{2}$$

What if I don't know v ?

$$s = \frac{(v+u)t}{2}$$

$$v = u + at$$

$$s = \frac{(u+at+u)t}{2} = \frac{(2u+at)t}{2}$$

$$s = \frac{2ut+at^2}{2} \longrightarrow s = ut + \frac{1}{2}at^2$$

Physics Data Booklet

Sub-topic 2.1 – Motion

$$v = u + at$$

$$s = ut + \frac{1}{2}at^2$$

$$v^2 = u^2 + 2as$$

$$s = \frac{(v + u)t}{2}$$

One more equation

$$v^2 = u^2 + 2as$$

Equations

	m	$m\ s^{-1}$	$m\ s^{-1}$	$m\ s^{-2}$	s
$v = u + at$		u	v	a	t
$s = ut + \frac{1}{2}at^2$	s	u		a	t
$v^2 = u^2 + 2as$	s	u	v	a	
$s = \frac{(v+u)t}{2}$	s	u	v		t

Try This | 3

You speed up with a uniform acceleration from 0 m/s to 30 m/s in 5 seconds. How far have you gone?

$v = u + at$		u	v	a	t
$s = ut + \frac{1}{2}at^2$	s	u		a	t
$v^2 = u^2 + 2as$	s	u	v	a	
$s = \frac{(v+u)t}{2}$	s	u	v		t

$$s = \frac{(30+0)(5)}{2} = 75 \text{ m}$$

s	?
u	0 m s ⁻¹
v	30 m s ⁻¹
a	-----
t	5 s

Try This | 4

If a plane on a runway is accelerating at 4.8 m s^{-2} for 15 seconds before taking off, how long should the runway be?

$$s = ut + \frac{1}{2}at^2$$

$$= (0)(15) + \frac{1}{2}(4.8)(15)^2$$

$$s = 540 \text{ m}$$

s	?
u	0 m s^{-1}
v	-----
a	4.8 m s^{-2}
t	15 s

Try This | 5

A driver slams on the brakes and skids for 3 seconds before coming to a stop. You go and measure that the skid marks show a deceleration over 9 m. What was the initial speed of the car?

$$s = \frac{(v+u)t}{2}$$

$$u = \frac{2s}{t} - v = \frac{2(9)}{(3)} - 0$$

$$u = 6 \text{ m s}^{-1}$$

s	9 m
u	?
v	0 m s ⁻¹
a	-----
t	3 s

Lesson Takeaways

- ☐ I can identify the 5 primary variables of motion
- ☐ I can identify the proper kinematic equation to use for a problem that is presented
- ☐ I can rearrange to solve for the unknown variable
- ☐ I can calculate for an unknown

Free Fall

IB PHYSICS | MOTION

What is Free Fall?

The only force acting on the object is gravity

No Air Resistance

Acceleration due to Gravity

-9.81 m s^{-2}

negative

What if you drop something?

What do you know?

s	
u	0 m s^{-1}
v	
a	-9.81 m s^{-2}
t	

What if you throw something up?

What do you know?

1st Half

s	
u	
v	0 m s^{-1}
a	-9.81 m s^{-2}
t	

2nd Half

s	
u	0 m s^{-1}
v	
a	-9.81 m s^{-2}
t	

What if you throw something down?

What do you know?

s	
u	
v	
a	-9.81 m s^{-2}
t	

Reminder of our Equations

<i>Units</i>	<i>m</i>	<i>m s⁻¹</i>	<i>m s⁻¹</i>	<i>m s⁻²</i>	<i>s</i>
$v = u + at$		<i>u</i>	<i>v</i>	<i>a</i>	<i>t</i>
$s = ut + \frac{1}{2}at^2$	<i>s</i>	<i>u</i>		<i>a</i>	<i>t</i>
$v^2 = u^2 + 2as$	<i>s</i>	<i>u</i>	<i>v</i>	<i>a</i>	
$s = \frac{(v+u)t}{2}$	<i>s</i>	<i>u</i>	<i>v</i>		<i>t</i>

Dropping a marble

If you drop a marble off of the Empire State Building (~380 m), how fast will it be going once it reaches the ground?

$$v^2 = u^2 + 2as$$

$$v = \sqrt{0^2 + 2(-9.81)(380)}$$

$$v = -86.3 \text{ m s}^{-1}$$

*The negative indicates a downward direction

s	-380 m
u	0 m s ⁻¹
v	?
a	-9.81 m s ⁻²
t	---

Shooting a Basket

What is the vertical velocity of a basketball required to reach the rim of the basketball hoop? (~3.0 m high)

$$v^2 = u^2 + 2as$$

$$0^2 = u^2 + 2(-9.81)(3)$$

$$u = 7.67 \text{ m s}^{-1}$$

s	3 m
u	?
v	0 m s ⁻¹
a	-9.81 m s ⁻²
t	---

Flipping a Coin

You flip a coin and catch it. It is in the air for a total of 0.6 seconds. How high did it go?

$$s = ut + \frac{1}{2}at^2$$

$$s = \frac{1}{2}(-9.81)(0.3)^2$$

$$s = 0.441 \text{ m}$$

s	?
u	0 m s^{-1}
v	---
a	-9.81 m s^{-2}
t	0.3 s

Half the time

Lesson Takeaways

- ☐ I can identify the constant acceleration due to gravity neglecting air resistance
- ☐ I can interpret a free fall problem to identify hidden values and understand when to look at only half of the problem
- ☐ I can use the kinematic equations to solve a free fall problems

Projectile Motion

IB PHYSICS | MOTION

Reminder of our Equations

<i>Units</i>	<i>m</i>	<i>m s⁻¹</i>	<i>m s⁻¹</i>	<i>m s⁻²</i>	<i>s</i>
$v = u + at$		<i>u</i>	<i>v</i>	<i>a</i>	<i>t</i>
$s = ut + \frac{1}{2}at^2$	<i>s</i>	<i>u</i>		<i>a</i>	<i>t</i>
$v^2 = u^2 + 2as$	<i>s</i>	<i>u</i>	<i>v</i>	<i>a</i>	
$s = \frac{(v+u)t}{2}$	<i>s</i>	<i>u</i>	<i>v</i>		<i>t</i>

Dropping the Ball

How much time will it take this ball to hit the ground when dropped? The impact velocity?

$$s = \cancel{ut} + \frac{1}{2}at^2$$
$$-25 = \frac{1}{2}(-9.81)t^2$$

$$t = 2.26 \text{ s}$$

$$v^2 = \cancel{u^2} + 2as$$

$$v = \sqrt{2as} = \sqrt{2(-9.81)(-25)}$$

$$v = -22.2 \text{ m s}^{-1}$$

s	-25 m
u	0 m s ⁻¹
v	?
a	-9.81 m s ⁻²
t	?

Air Time - Comparison

Which ball will have
more air time?

The balls hit the ground at
EXACTLY the same time

Air Time - Comparison

Constant
Velocity

Free Fall

Horizontal Projectile

From Previous Problem →

Vertical Only

How far does the ball travel?

$$v = \frac{d}{t}$$

$$d = vt = (10 \text{ m s}^{-1})(2.26 \text{ s})$$

$$d = 22.6 \text{ m}$$

Vertical Only	
s	-25 m
u	0 m s ⁻¹
v	-22.2 m s ⁻¹
a	-9.81 m s ⁻²
t	2.26 s

One Dimensional Motion

Vertical
Accelerating

Horizontal
Constant Velocity

$$[v = d/t]$$

Horizontal Projectile

Two-Dimensional Projectile

Which one lands first??

Which one lands first??

Lesson Takeaways

- ☐ I can compare the motion of an object dropped from rest and an object with an initial horizontal velocity
- ☐ I can calculate the air time and speed for a horizontal projectile
- ☐ I can describe how the vertical and horizontal components are independent from each other for a projectile's motion
- ☐ I can compare the air time for two projectiles given their trajectories.
