

# Latent Heat and Heating Curves

---

IB PHYSICS | THERMAL PHYSICS

# Review of Specific Heat

Quantity	Symbol	Unit
Heat Energy	Q	[J]
Mass	m	[kg]
Specific Heat	c	[J kg <sup>-1</sup> K <sup>-1</sup> ]
Change in Temp	$\Delta T$	K or °C

$$Q = mc\Delta T$$

# Calculating Heat Transfer

How much heat energy is required to heat up 2 kg of liquid water from its freezing point to its boiling point?

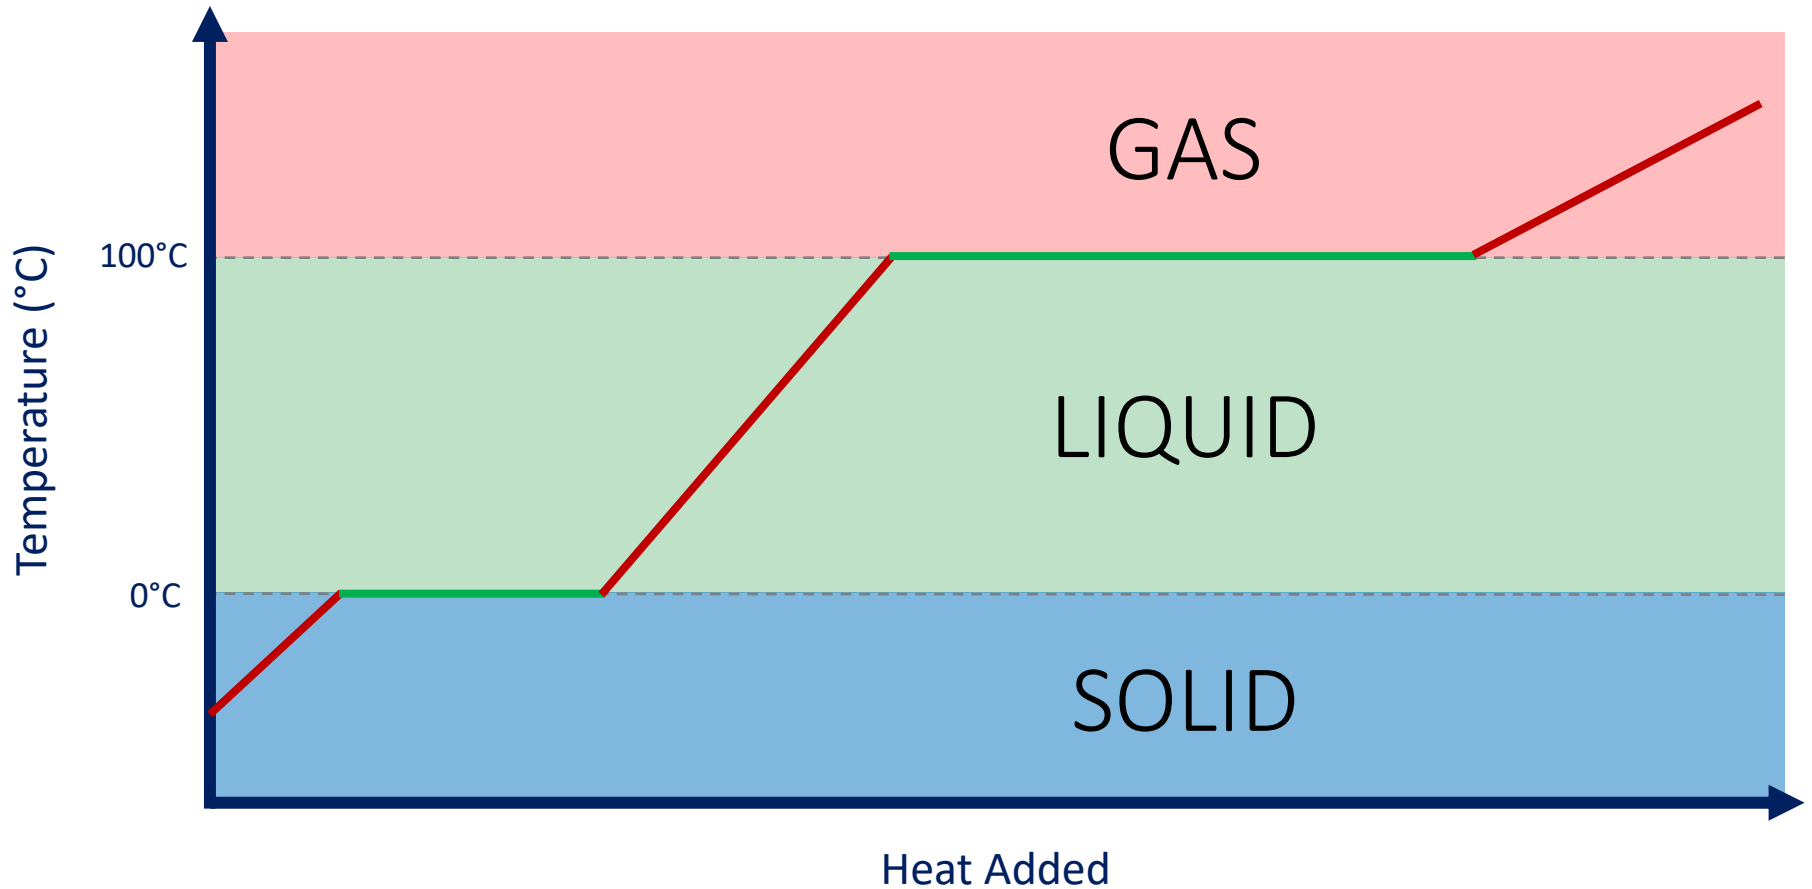

$$Q = mc\Delta T$$

**Specific Heat of Water**

4180 J kg<sup>-1</sup> K<sup>-1</sup>

# Heating Curve

# Why a Plateau?

**Bonds are breaking** as solid changes to liquid and then again when liquid changes to gas. This takes time!

# Adding Heat | Internal Energy

*All heat added becomes internal energy*

$$E_{\text{INT}} = E_{\text{K}} + E_{\text{P}}$$

Changing the temperature of the solid, liquid, or gas?

Causing the substance to change phases?

# Specific Latent Heat

**Specific Latent Heat** is the amount energy transferred when 1 kg of the substance changes phase at a constant temp.

Melting or Freezing	Latent Heat of Fusion	$L_f$
Boiling or Condensing	Latent Heat of Vaporization	$L_v$

Specific Latent Heat for Water ( $H_2O$ ):

Latent Heat of Fusion	$334,000 \text{ J kg}^{-1}$
Latent Heat of Vaporization	$2,260,000 \text{ J kg}^{-1}$

# Specific Latent Heat Equation

Quantity	Symbol	Unit
Heat Energy		
Mass		
Specific Latent Heat		

$$Q = mL$$

\*This equation works for heat energy gained as well as heat energy lost\*

# Heating Curve

$$Q = mc\Delta T$$

# Heating Curve

$$Q = mc\Delta T$$

# Heating Curve

# Heating Curve

# Try This...

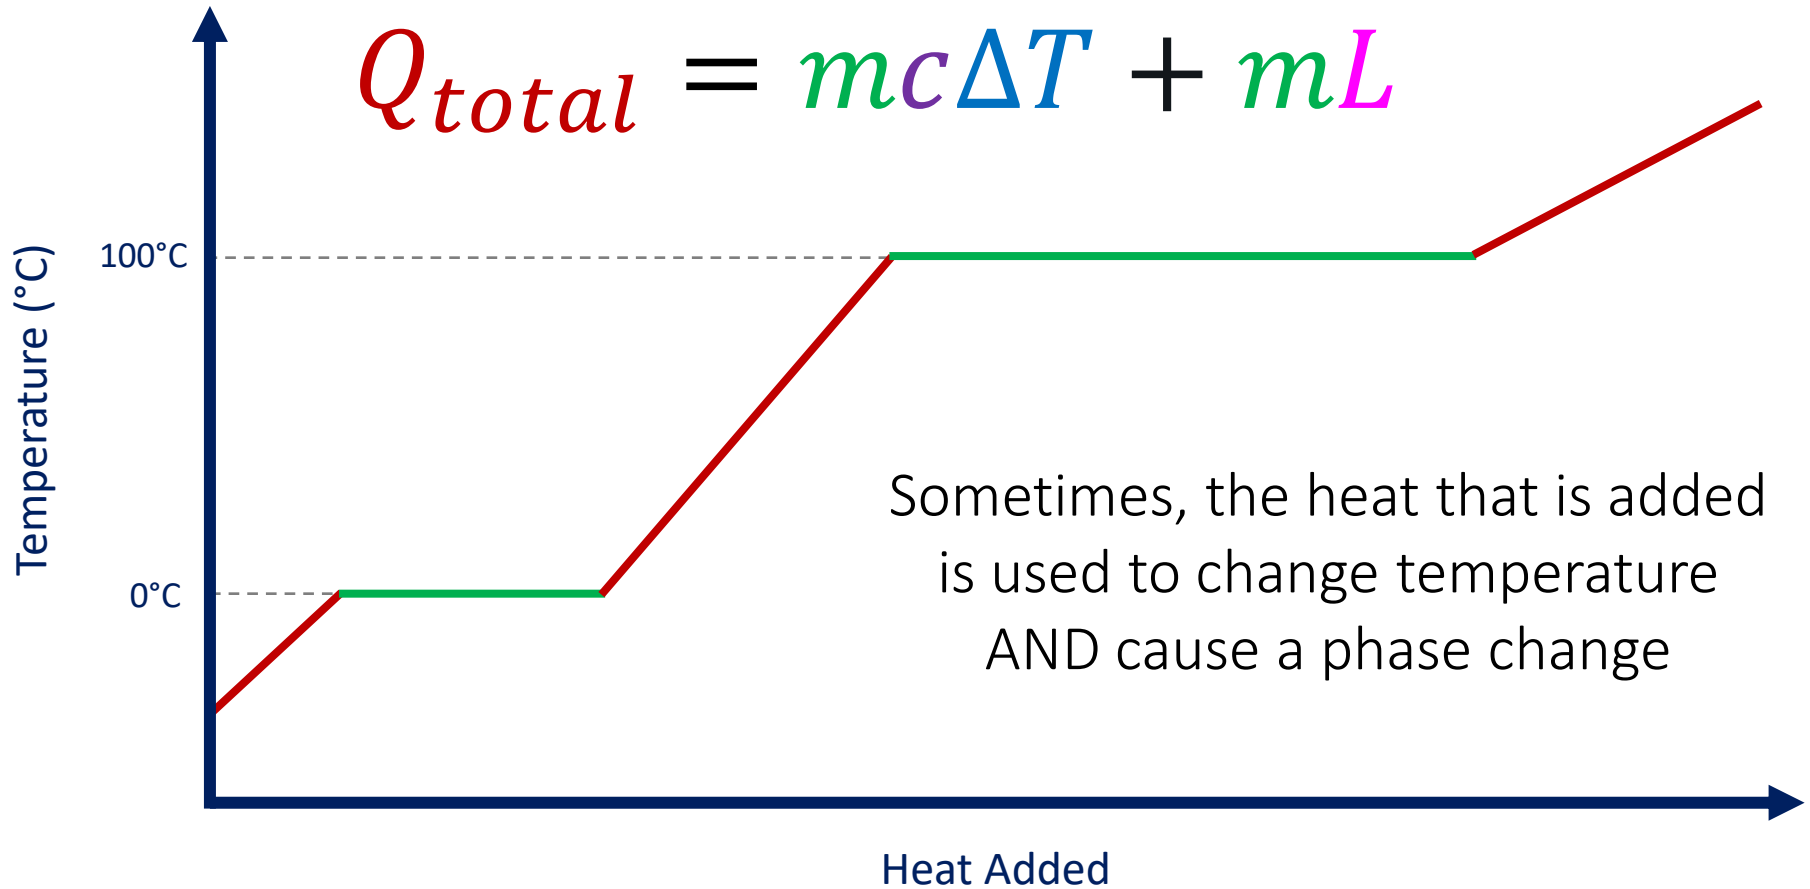

If the latent heat of fusion of a certain kind of chocolate is  $160,000 \text{ J kg}^{-1}$ , how much thermal energy is removed from you when a 10 g bar of chocolate melts in your mouth?

$$Q = mL$$

# Specific Heat Combined

$$Q_{total} = mc\Delta T + mL$$

# Try This...

How much heat is needed to transform 0.5 kg of ice at -20 °C into water at 50 °C ?

Specific Heat of Ice	2090 J kg <sup>-1</sup> K <sup>-1</sup>
Specific Heat of Water	4180 J kg <sup>-1</sup> K <sup>-1</sup>
Latent Heat of Fusion	334,000 J kg <sup>-1</sup>
Latent Heat of Vaporization	2,260,000 J kg <sup>-1</sup>

# Evaporation vs Boiling

Evaporation:

Boiling:

# Example IB Questions

10. A solid piece of tungsten melts into liquid without a change in temperature. Which of the following is correct for the molecules in the liquid phase compared with the molecules in the solid phase?

	<b>Kinetic energy</b>	<b>Potential energy</b>
A.	same	greater
B.	same	same
C.	greater	greater
D.	greater	same

11. The specific latent heat of a substance is defined as the energy required at constant temperature to
- A. change the phase.
  - B. change the phase of 1 kg.
  - C. change the phase of 1 m<sup>3</sup>.
  - D. change the phase of 1 kg every second.

# Try This...

How much heat is needed to transform 1.4 kg of water at 23°C into water vapor at 120 °C?

Specific Heat of Water Vapor	2000 J kg <sup>-1</sup> K <sup>-1</sup>
Specific Heat of Water	4180 J kg <sup>-1</sup> K <sup>-1</sup>
Latent Heat of Fusion	334,000 J kg <sup>-1</sup>
Latent Heat of Vaporization	2,260,000 J kg <sup>-1</sup>

# Lesson Takeaways

- I can describe the features of a heating curve and why it plateaus during phase changes
- I can define specific latent heat with proper units
- I can calculate the heat required to cause a certain amount of a substance to change phases
- I can compare the processes of evaporation and boiling
