# Kinetic Molecular Theory 

IB PHYSICS | THERMAL PHYSICS

## Kinetic Theory of Gases

## Assumptions:

- Large \# of identical molecules
- Volume of molecules is negligible
- Motion is random
- No forces between molecules
- All collisions are elastic

## Review of Momentum / Collisions

What is the force of this ball on the wall?

## Impulse $=F \Delta t=\Delta p$

$$
\begin{aligned}
& \mathrm{m}=5 \mathrm{~kg} \\
& \Delta \mathrm{t}=0.2 \mathrm{~s}
\end{aligned}
$$

## Pressure

When many molecules collide with the sides of a container it is measured as pressure

## Quantity Symbol Unit <br> Force <br> $$
p=\frac{F}{A}
$$ <br> Area

Pressure

## A brief interlude...

## Units of Pressure

There are several different units used to measure pressure of a gas

$$
1 \text { atm }=101,325 \mathrm{~Pa}=760 \text { Torr }=760 \mathrm{~mm} \mathrm{Hg}
$$

## Atmospheric Pressure

What is the force from atmospheric pressure on this doormat?

## Temperature Review

Measure of how hot or cold something feels
Temperature is the average kinetic energy of the molecules of a substance

Kelvin Scale (K)

## Average Kinetic Energy

$$
\bar{E}_{K}=\frac{3}{2} k_{B} T \quad \begin{aligned}
& k_{B} \rightarrow \text { Boltzmann's constant } \\
& k_{B}=1.38 \times 10^{-23} J K^{-1}
\end{aligned}
$$

## IB Physics Data Booklet

| Sub-topic 3.1 - Thermal concepts | Sub-topic 3.2 - Modelling a gas |
| :--- | :--- |
| $Q=m c \Delta T$ | $p=\frac{F}{A}$ |
| $Q=m L$ | $n=\frac{N}{N_{\mathrm{A}}}$ |
|  | $p V=n R T$ |
|  | $\bar{E}_{\mathrm{K}}=\frac{3}{2} k_{\mathrm{B}} T=\frac{3}{2} \frac{R}{N_{\mathrm{A}}} T$ |

| Quantity | Symbol | Approximate value |
| :--- | :---: | :--- |
| Acceleration of free fall (Earth's surface) | $g$ | $9.81 \mathrm{~m} \mathrm{~s}^{-2}$ |
| Gravitational constant | $G$ | $6.67 \times 10^{-11} \mathrm{~N} \mathrm{~m}^{2} \mathrm{~kg}^{-2}$ |
| Avogadro's constant | $N_{\mathrm{A}}$ | $6.02 \times 10^{23} \mathrm{~mol}^{-1}$ |
| Gas constant | $R$ | $8.31 \mathrm{~J} \mathrm{~K}^{-1} \mathrm{~mol}^{-1}$ |
| Boltzmann's constant | $k_{\mathrm{B}}$ | $1.38 \times 10^{-23} \mathrm{~J} \mathrm{~K}^{-1}$ |

## Try This | 1

Calculate the average translational kinetic energy of molecules in the air at $27^{\circ} \mathrm{C}$

## What is Kinetic Energy?

$$
\bar{E}_{K}=\frac{3}{2} k_{B} T \quad \begin{aligned}
& k_{B} \rightarrow \text { Boltzmann's constant } \\
& k_{B}=1.38 \times 10^{-23} J K^{-1}
\end{aligned}
$$

## Try This | 2

Calculate the average speed for oxygen molecules at $0^{\circ} \mathrm{C}$. (the mass of an oxygen molecule is $5.32 \times 10^{-26} \mathrm{~kg}$ )

## Which molecules move faster?

$\mathrm{H}_{2}$ gas at $23^{\circ} \mathrm{C}$

$\mathrm{O}_{2}$ gas at $23^{\circ} \mathrm{C}$ 8

$$
\mathrm{O}_{16.00}
$$

## Lesson Takeaways

$\square$ I can describe the conditions necessary for a substance to be considered an ideal gas
I can define pressure with appropriate fundamental and derived units

I can relate average molecular kinetic energy with absolute temperature
$\square$ I can calculate the average molecule speed for a molecule at a certain temperature
$\square$ I can discuss how the mass of a molecule changes its overall speed at a given temperature
