## Thermal Physics IB Physics Content Guide

## Big Ideas

- The macroscopic effects of volume, pressure, and temperature can be understood with a microscopic model
- Kinetic Energy on a molecular level is observed as temperature and heat
- The heat required to change the temperature or phase of a material is a property of the material itself
- The properties of an ideal gas are proportional to each other and can be calculated under certain conditions

## Content Objectives

## 1 - Heat vs Temperature

| I can explain the relationship between temperature and molecular kinetic energy |  |  |
| :--- | :--- | :--- |
| I can describe the energies present in an object's total internal energy |  |  |
| I can convert between Celsius and Kelvin |  |  |
| I can describe the nature of molecules when at a temperature of absolute zero |  |  |
| I can compare temperature (average KE) and heat (total KE) |  |  |
| I can describe the molecular process that allows heat to flow |  |  |

## 2 - Specific Heat

| I can define specific heat capacity with proper units |  |  |
| :--- | :--- | :--- |
| I can describe the effect of larger or smaller specific heat values |  |  |
| I can relate specific heat capacity to the heat energy and temperature change |  |  |
| I can describe how a calorimeter uses the conservation of heat to study a material's specific heat |  |  |
| I can experimentally determine the specific heat capacity of a material |  |  |

## 3 - Latent Heat

| I can identify key features in a material's heating curve |  |  |  |
| :--- | :--- | :--- | :--- |
| I can describe why a heating curve plateaus during phase changes |  |  |  |
| I can describe the different ways that the heat added to a system can become internal energy |  |  |  |
| I can define specific latent heat with proper units |  |  |  |
| I can calculate the heat required to cause a certain amount of a substance to change phases |  |  |  |
| I can compare the processes of evaporation and boiling |  |  |  |

## 4 - Kinetic Gas Theory and The Mole

| I can describe the conditions necessary for a substance to be considered an ideal gas |  |  |
| :--- | :--- | :--- |
| I can define pressure with appropriate fundamental and derived units |  |  |
| I can relate average molecular kinetic energy with absolute temperature |  |  |
| I can calculate the average molecule speed for a molecule at a certain temperature |  |  |
| I can discuss how the mass of a molecule changes its overall speed at a given temperature |  |  |
| I can describe the importance of having a large quantity like the "mole" defined |  |  |
| I can identify the difference between different isotopes of an element |  |  |
| I can calculate an atom's mass number when given the number of protons and neutrons |  |  |
| I can use the average atomic weight of an element to convert between mass and moles |  |  |

5 - Gas Laws

| I can identify conditions when a substance is no longer considered an ideal gas |  |  |
| :--- | :--- | :--- |
| I can describe the relationship between volume and pressure for an ideal gas (Boyle's Law) |  |  |
| I can describe the relationship between temperature and pressure for an ideal gas (Pressure Law) |  |  |
| I can describe the relationship between temperature and volume for an ideal gas (Charles's Law) |  |  |
| I can use the Ideal Gas Law to solve for pressure, volume, amount, or temperature |  |  |
| I can use the Ideal Gas Law to describe how changing one or more variable(s) would affect another |  |  |

## Thermal Physics

## Shelving Guide

## Data Booklet Equation:

Temperature $(\mathrm{K})=$ Temperature $\left({ }^{\circ} \mathrm{C}\right)+273$

Conditions for Absolute Zero:

Specific Heat Capacity and Specific Latent Heat

|  | Variable <br> Symbol | Unit |
| :---: | :---: | :---: |
| Heat Energy |  |  |
| Mass |  |  |
| Specific Heat Capacity |  |  |
| Change in Temperature |  |  |
| Specific Latent Heat |  |  |

## Data Booklet Equations:

$$
\begin{gathered}
Q=m c \Delta T \\
Q=m L
\end{gathered}
$$

## $E_{K}$

## Ep

Heating Curves

Heat Added

Heat Added

| Pressure | Variable Symbol | Unit |  |
| :---: | :--- | :--- | :--- |
| Force |  |  |  |
| Area |  |  |  |
| Pressure |  |  |  |

## Data Booklet Equation:

$$
p=\frac{F}{A}
$$

## Kinetic Theory and Temperature

|  | Variable Symbol | Unit |
| :---: | :--- | :--- |
| Average Kinetic Energy |  |  |
| Absolute Temperature |  |  |
| Boltzmann's Constant |  |  |

## Data Booklet Equation:

$$
\begin{gathered}
\bar{E}_{K}=\frac{3}{2} k_{B} T=\frac{3}{2} \frac{R}{N_{A}} T \\
k_{B}=1.38 \times 10^{-23} \mathrm{~J} \mathrm{~K}^{-1}
\end{gathered}
$$

| Avogadro's Number | $\mathrm{N}_{\mathrm{A}}$ |  |
| :--- | :--- | :--- |

| Ideal Gas Law | Variable Symbol | Unit |
| :---: | :---: | :---: |
| Pressure |  |  |
| Volume |  |  |
| Number of Molecules |  |  |
| Gas Constant |  |  |
| Temperature |  |  |

## Data Booklet Equations:

 $p V=n R T \quad R=8.31 \mathrm{~J} \mathrm{~K}^{-1} \mathrm{~mol}^{-1}$ Conditions for Ideal Gases:
## Ideal Gas Relationships
